PROJECTS

RADIUS | DEVELOPER

User data driven app to find and compare restaurant reviews, traffic and wait-times

October 2018

PERSONALLY IMPLEMENTED:

- Wait time and user traffic (check in) heatmap front-end via Uber's react-map-gl, deck.gl, and Redux
- Wait time and check in PostgreSQL/Sequelize modeling including all Sequelize afterCreate and beforeCreate hooks, virtual getters (including suggested restaurant algorithm) relevant setter methods and Express routes.
- Express route and Redux store to query for yelp restaurant data to store yelp data with google data and averaged radius data in database and update props on popup only on individual marker click

BOOKSTACK | DEVELOPER

An e-commerce website that sells books

September 2018

PERSONALLY IMPLEMENTED:

- Filter by genre feature
- Order and line-item modeling including beforeCreate hook to permanently set line-item price in database according to current book price, and afterCreate hook to set order's total price based off totaled line-item prices and quantity
- Checkout process where order is created by referencing cart contents to their price listing in the database and line-item price and total order price are set as creation hooks before stripe token is charged and email sent

METAMASTER | SOLE DEVELOPER

A website that analyzes user's gaming account data

September 2018

- Developed using React, Redux, Express and Victory.js for data visualization
- Integrated Riot Games Developer API & Champion.gg 3rd party beta API
- Involved heavy data cleaning and API rate limiting
